Amendments to the Specification

Please replace paragraph [0060] with the following amended paragraph:

[0060] The CeO_2 layer should be at least 50 nm in thickness, but for adequate orientation to be obtained, at least 100 nm is preferable, and at least 500 nm is even better. However, if the thickness exceeds $\underline{5000500}$ nm, crystal orientation will suffer. Therefore, a thickness of $\underline{5000500}$ nm or less is preferred.

<Oxide Superconducting Film>
